

Suppose you are using Google Earth to find a location on the surface of the Earth. The coordinates have North latitude and West longitude, but you forget to enter the longitude as a negative number. Where does Google Earth take you?

1. The exact point on the opposite side of the Earth.
2. The exact other side of the world, in the Northern hemisphere.
3. Somewhere on the other side of the world, not necessarily exactly the other side, in the Northern hemisphere.
4. Somewhere on the other side of the world, not necessarily exactly the other side, in the Southern hemisphere.
